Dairy Industry

Sector characteristics

Control and hygiene are two key factors in all processes related to dairy products. It is of vital importance to ensure the reliability of the spare parts forming part of or in contact with the machinery used to make them, and that they are designed to operate efficiently and safely, and able to withstand CIP cleaning systems.

The FDA, CE 1935, NSF and EHEDG food certification systems guarantee that the necessary steps are taken to prevent product contamination.

Our seals, materials and services catalogue enables us to fulfil the most stringent requirements of the sector, offer solutions in terms of consumables and spare parts that are compatible with the major machinery manufacturers and participate in resolving routine incidents that arise in the plant.

Extrusion profiles

Manhole" gaskets for tanks and agitators.

Flat seals

In materials that can withstand high temperatures in heat exchangers and valves.

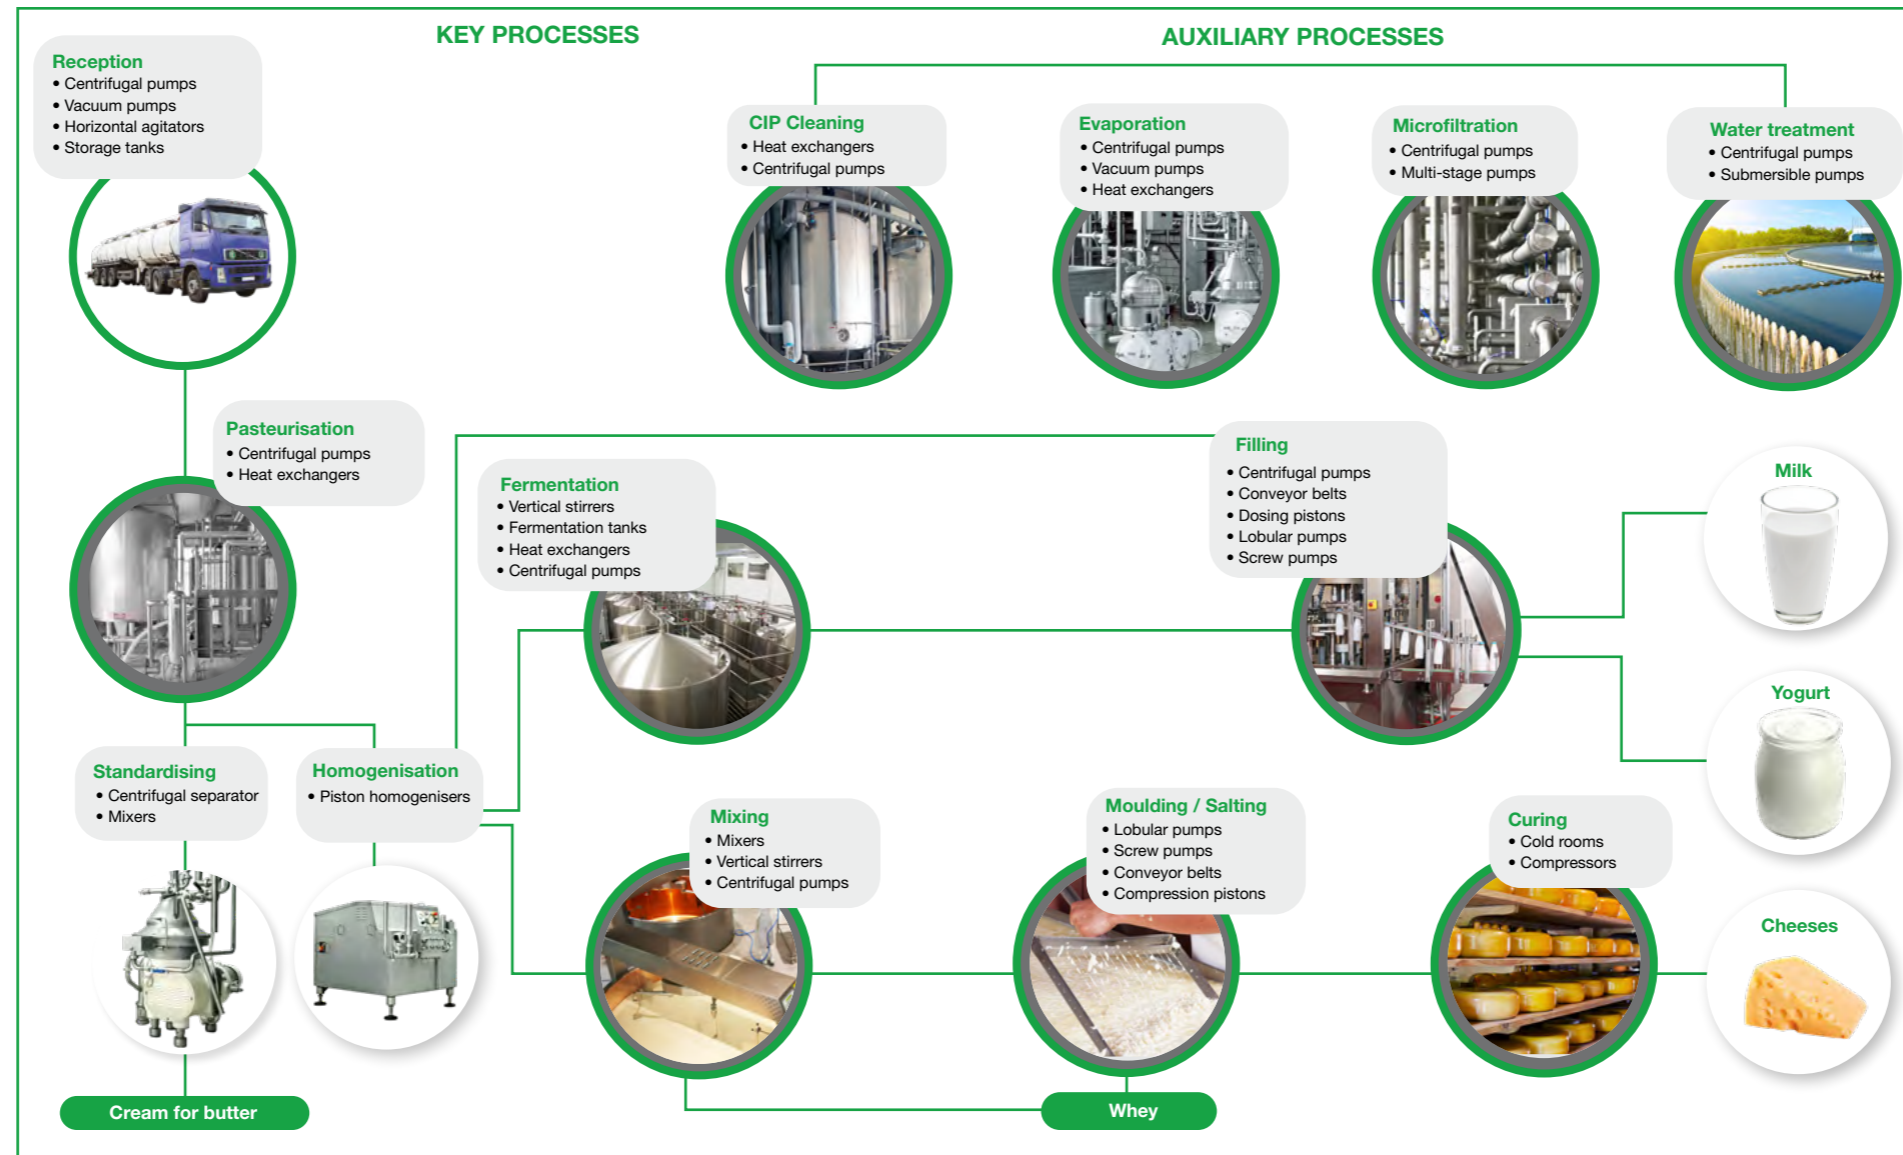

O-rings and clamps

For all fluid connections: clamps, D-rings, SMS.

Mechanical seals and bearings

For single and multi-stage centrifugal pumps, submersible, lobular and screw pumps, for screw compressors and agitators.

Services

Repairing of standard mechanical seals and mechanical seals with special designs. Repairing of pumps and motors in contract workshops, with proven experience.

Rod/piston seals and membranes

Seals made of elastomeric, polyurethane or PTFE materials with silicone filling for dosing machines and for piston pumps and homogenisers.

Belts and chains

For conveyor belts and storage machinery.

Chemicals

Lubricating greases that are suitable for direct contact with food (NSF H1 and NSF H2). Metal surface cleaners.

Anaerobic Resins

For fastening with all types of bolts and screws.

Bolts and Screws

BUMAX 88 and BUMAX 109 quality fixation, equivalent to the 8.8 and 10.9 of steels in terms of resistance.
